

### **black hole astrophysics the pdf**

A stellar black hole (or stellar-mass black hole) is a black hole formed by the gravitational collapse of a star. They have masses ranging from about 5 to several tens of solar masses. The process is observed as a hypernova explosion or as a gamma ray burst. These black holes are also referred to as collapsars

### **Stellar black hole - Wikipedia**

A black hole is a region of spacetime exhibiting such strong gravitational effects that nothingâ€”not even particles and electromagnetic radiation such as lightâ€”can escape from inside it. The theory of general relativity predicts that a sufficiently compact mass can deform spacetime to form a black hole. The boundary of the region from which no escape is possible is called the event horizon.

### **Black hole - Wikipedia**

Their information is preserved forever on the surface of the black hole. They're all totally dead, but their information, their precious precious quantum information, is totally safe.

5 thoughts on "Best Evidence Yet for an Intermediate-Mass Black Hole" • Randall-Pfeiffer February 13, 2017 at 1:01 pm. All supermassive black holes must have evolved from conditions with no ...

### **Best Evidence Yet for an Intermediate-Mass Black Hole**

Using a Bayesian approach, we combine measurements of neutron star macroscopic observables obtained by astrophysical and gravitational observations, to derive joint constraints on the equation of state (EoS) of matter at supranuclear density.
