Chapter 1 Introduction to odes. A differential equation is an equation for a function that relates the values of the function to the values of its derivatives.

Introduction to Differential Equations

The graph of a solution of a differential equation is called an integral curve for the equation, so the general solution of a differential equation produces a family of integral curves corresponding to the different possible choices for the arbitrary constants.

MATHEMATICAL MODELING WITH DIFFERENTIAL EQUATIONS M

Elementary Differential Equations with Boundary Value Problems is written for students in science, engineering, and mathematics who have completed calculus through partial differentiation. If your syllabus includes Chapter 10 (Linear Systems of Differential Equations), your students should have some preparation in linear algebra.

Differential Equations. Many physical phenomena can be modeled using the language of calculus. For example, observational evidence suggests that the temperature of a cup of tea (or some other liquid) in a room of constant temperature will cool over time at a rate proportional to the difference between the room temperature and the temperature of the tea.

A differential equation with an initial condition is called an initial value problem. It has a unique solution, called the particular solution to the differential equation. EXAMPLE 2 Solving an Initial Value Problem. Find the particular solution to the equation $dy/dx = 6x^2$ whose graph passes through the point $(1, 0)$.

Chapter Differential Equations and Mathematical Modeling

The right-hand branch is the graph of a different solution of the differential equation that is defined (and continuous) on the different interval $(1, \infty)$. So the single formula $y(x) = 1/(1 - x)$ actually defines two different solutions (with different domains of definition) of the same differential equation $y' = y^2$.

The "A First Course in Differential Equations with Modeling Applications 10th Edition" strikes a balance between the analytical, qualitative, and quantitative approaches to the study of differential equations.

A First Course in Differential Equations with Modeling

In this chapter we model natural processes with differential equations in order to answer these and many other questions. 1.1 A Modeling Adventure Differential equations provide powerful tools for explaining the behavior of dynamically changing processes. We will use them to answer questions about processes that are hard to answer in any other ...
