The Kerr effect, also called the quadratic electro-optic (QEO) effect, is a change in the refractive index of a material in response to an applied electric field. The Kerr effect is distinct from the Pockels effect in that the induced index change is directly proportional to the square of the electric field instead of varying linearly with it. All materials show a Kerr effect, but certain ...

The Optical Society of Southern California was founded in 1951 to increase and disseminate the knowledge of optics and closely allied sciences and to promote the mutual interests of investigators, organizations, teachers and students in these fields. The Society is a local section of the The Optical Society (OSA) and typically meets on the second Wednesday of each month from October through June.

An optical fiber is a flexible, transparent fiber made by drawing glass or plastic to a diameter slightly thicker than that of a human hair. Optical fibers are used most often as a means to transmit light between the two ends of the fiber and find wide usage in fiber-optic communications, where they permit transmission over longer distances and at higher bandwidths (data rates) than electrical ...

Back to Sam's Laser FAQ Table of Contents. Foreword Sam's Laser FAQ evolved to become what it is today from a short note on safely powering low power laser diodes which I had written around 1996 in conjunction with the CD player repair guide (part of the Sci.Electronics.Repair FAQ).
