Numerical Techniques in Electromagnetics with MATLAB, Third Edition. Most notable amongst these are the enhancements made to the standard algorithm for the finite-difference time-space (FDTD) method and treatment of absorbing boundary circumstances in FDTD, finite difference, and transmission-line-matrix methods.

FEM is a more powerful and versatile numerical technique for handling problems involving complex geometries and inhomogeneous media. The systematic generality of the method makes it possible to construct general-purpose computer programs for solving a wide range of problems. Consequently, programs developed for a particular

Numerical Methods in Electromagnetics Many problems in electromagnetics cannot be solved analytically and require a numerical solution. The governing equations in these problems (Maxwell's equations or related equations) can take the form of either a differential equation or an integral equation.
