3. Methodology. In order to find out the requirements for the deliverables of the Working Group, use cases were collected. For the purpose of the Working Group, a use case is a story that describes challenges with respect to spatial data on the Web for existing or envisaged information systems.

CCA is a powerful, easy to use method for multichannel data analysis. â€¢ CCA finds an optimal linear model to relate stimulus and brain response.

Decoding the auditory brain with canonical component

The auditory cortex is the part of the temporal lobe that processes auditory information in humans and other vertebrates. It is a part of the auditory system, performing basic and higher functions in hearing, such as possible relations to language switching.. It is located bilaterally, roughly at the upper sides of the temporal lobes â€œ in humans on the superior temporal plane, within the ...

Big data refers to data sets that are too large or complex for traditional data-processing application software to adequately deal with. Data with many cases (rows) offer greater statistical power, while data with higher complexity (more attributes or columns) may lead to a higher false discovery rate. Big data challenges include capturing data, data storage, data analysis, search, sharing ...

Raster For the datasets listed below, pre-computed raster data are available from OpenTopography. These data include digital elevation model (DEM) layers computed from aerial lidar surveys and raster data from the

Satellite Radar Topography Mission (SRTM) and other global datasets.

Use: Geosmin is the scent of a freshly ploughed field, the first rain after a dry period, damp and deceptively powerful. Geosmin doesn't seem particularly strong when you sniff the 1% solution, but even a drop or two will have your neighbours wondering whether it's raining.

We present trellis networks, a new architecture for sequence modeling. On the one hand, a trellis network is a temporal convolutional network with special structure, characterized by weight tying across depth and direct injection of the input into deep layers.

This document describes the CF conventions for climate and forecast metadata designed to promote the processing and sharing of files created with the netCDF Application Programmer Interface .The conventions define metadata that provide a definitive description of what the data in each variable represents, and of the spatial and temporal properties of the data.
